

Pine Point Tree Service

Website Project Overview | Prepared by FITFO Systems
March 2026

FIT[F]O Systems

What This Is

A website designed to establish trust quickly, show your work clearly, and make it easy for homeowners to take the next step — whether that's calling you directly or scheduling a follow-up.

The site is built, styled, and ready for your review.

How the Site Is Structured

The layout follows how a homeowner actually decides who to call. Each section answers the next question in their head.

Your Equipment — First Impression

- Opens with your truck, chipper, and equipment on a real job site
- Communicates immediately that you show up prepared
- Trust badges below: Fully Insured, Licensed, Free Estimates, Cleanup Included

Future improvement: An action shot from a job would create a stronger first impression. Worth capturing on a future job.

Services — What Do You Do?

- Four service cards: Tree Removal, Trimming & Pruning, Stump Grinding, Lot Clearing
- Each explains the scope clearly so homeowners can tell if their situation fits
- Descriptions mention real scenarios — near homes, power lines, driveways, 80-foot hardwoods

Why Pine Point — Why Should I Trust You?

- Owner on every job — no middlemen
- Fully insured — property protected
- Transparent pricing — no hidden fees, every estimate is free
- Full cleanup included — site left clean
- Positioned before photos because trust comes before proof

Needs your input: An owner photo would strengthen this. Homeowners hire people, not brands. We'd also like to include how long you've been in business.

Our Work — Prove It

- **Video leads the section** — the birch takedown over the house plays automatically on desktop, loads efficiently on mobile
- **Before/after comparisons** — four slider pairs visitors can drag to compare. On mobile, these show one at a time with arrows to cycle through
- **Lot clearing timeline** — the full transformation sequence from dense woods to cleared property
- **Stump carving spotlight** — the fairy house feature, positioned as something that makes Pine Point different

Note on before/after photos: Current photos show real work and are usable. The strongest comparisons come from shooting the same spot, same angle — before and after. Easy habit for future jobs that builds your best marketing asset over time.

Reviews — What Do Others Say?

Three verified customer reviews:

- **Susan B.** (Facebook) — oak grooming and brush trimming
- **Roger R.** (Facebook) — large maple near deck, pool, and fence
- **Isaac H.** (BBB) — three large trees, fair pricing, great communication

Action required: Please confirm these quotes are accurate and approved before the site goes live. This protects you and ensures everything published is truthful.

Service Area — Where Do You Work?

- Real map showing your 15-mile radius from Leicester
 - Massachusetts geography visible for context — Worcester, Boston, Springfield as reference points
 - Town list below the map
-

Contact — How Do I Reach You?

- Phone number, email, address, Facebook link
 - On mobile, a green call button is always visible at the bottom of the screen — one tap to call
-

The Estimate Tool

This is what sets Pine Point apart from other tree service websites in the area.

How It Works

- Homeowner selects a service, then answers targeted questions specific to that service type
- **Tree Removal:** tree count, height, nearby hazards, truck access, stump removal needed
- **Trimming:** tree count, main concern (overhang, shaping, deadwood, clearance), height, access
- **Stump Grinding:** stump count, diameter size, access, replant intent
- **Lot Clearing:** lot size, brush vs. trees density, equipment access, end goal
- Gets an instant price range — low, typical, high
- No phone call needed, no contact form required first

After the Estimate

Two clear next steps:

- **Schedule a Follow-Up** — opens a quick form (name, phone, preferred time window). We call you back to discuss and set up a free on-site visit.
- **Call Now** — tap to call directly

Custom Stump Carving

- Separate request form for creative work that can't be priced online
- Customer describes their idea and uploads photos of the stump
- You review and follow up

Pricing — Proof of Concept

- Current numbers are based on general industry ranges, not your actual completed jobs
 - Before going live, we want to compare against a handful of your recent invoices and adjust wherever they feel off
 - The system is designed to improve over time as real job data feeds back in
-

What Happens When Someone Submits

When a homeowner submits an estimate, schedules a follow-up, or sends a carving request:

- Their details go to a **Google Sheet** you can check on your phone anytime
 - You get an **email notification** with their name, phone, job details, and any photos they uploaded
 - Photos are saved in a **Google Drive folder** organized by submission
 - Cost: \$0/year — all Google services on the free tier
-

What We Need From You

- **Reviews** — are the three quotes accurate and approved?
- **Owner photo** — even a phone photo for the About section
- **Years in business** — how long have you been operating?
- **Jason's number** — should it be added?
- **Custom carving** — confirm you want this featured
- **Estimate check** — compare ranges against 3-5 recent jobs
- **Emergency work** — do you handle storm calls? What response time?

- **Service area** — any towns to add or remove?
-

What's Ready vs What Comes Later

Ready Now

- Complete website with all sections
- Estimate tool with service-specific pricing
- Custom carving request form
- Schedule follow-up modal
- Mobile-optimized with sticky tap-to-call
- Service area map with Massachusetts context
- Real customer reviews

Before Go-Live

- Wire form backend (Google Sheets + Drive + email notifications)
- Compress images for faster loading
- Set up HTTPS on GoDaddy
- Calibrate estimate pricing against real invoices

Future

- Google Business Profile setup
 - Automated review requests after completed jobs
 - Estimate accuracy improvement with real data
 - Seasonal promotion banners
 - Facebook/Instagram ads if needed
-

Sharing Your Feedback

We've set up a short online form to keep your feedback organized. It covers each section of the site with specific prompts — takes a few minutes, and you can skip anything you're not sure about.

Feedback Form: <http://previews.fitfosystems.com/feedback.html>

The form is structured to help you comment on what works, what feels off, and what needs confirmation — so we can make revisions efficiently without back-and-forth.

Next Steps

1. Review the Site

Preview link: <http://previews.fitfosystems.com>

- Click through on desktop and mobile
- Try the estimate tool — pick a service and go through the questions
- This is a working preview, not the final live site. Once approved, we deploy to pinepointtrees.com.

2. Send Your Feedback

- Use the feedback form linked above
- Confirm reviews, contact info, and service details

3. We Finalize and Launch

- Apply your feedback
- Wire up form submissions
- Deploy to your GoDaddy hosting
